

R-S-I Objectives

R-S-I Elektrotechnik GmbH & Co. KG was founded in 1974 and has since then been active in the design and manufacturing of control devices. Our products are well established in several different industries, e. g. in systems, medical and process engineering, in the food industry and in water treatment. We use this continuity and broad experience for the benefit of our customers.

Joining strengths – improving results: “with R-S-I – reliable, safe, innovative.”

Quality

We are convinced of and committed to the high quality of our products. We therefore make a point of continuously educating our employees in order to keep the company's knowledge up-to-date. The dedication of our approximately 50 employees shows in a very low employee turnover, which in turn helps us to steadily broaden our experience. And last but not least our integrated quality management is DIN certified (according to DIN EN ISO 9001:2000).

Innovation

In cooperation with the University of Applied Science at Ingolstadt (FH Ingolstadt) and the Technical University of Munich (TUM) we constantly monitor and evaluate technologic developments in order to enhance our existing competencies and build up new ones. Specific requests of our customers can thus be met more easily. Forward-looking technologies are taken into account during design and development as well as in manufacturing. This enables ongoing improvement of our products and processes.

Customer Satisfaction

We consider ourselves a partner for our customers and are committed to building trustful, longterm partnerships. Most important, therefore, are reliability and clear communication. Direct contact allows for the swift resolution of issues that occur – especially during the design and development phase – thereby saving time and avoiding misunderstandings. The entire staff of R-S-I is at your disposal employing our experience and knowledge to quickly find a reliable solution for your specific application.

R-S-I: Your reliable partner!
