

R-S-I Products and Services

We design and manufacture programmable control devices with a wide range of computing power and memory capacity, using a combination of input elements and displays. We offer simple solutions using push-buttons and seven-segment displays as well as sophisticated ones with joystick or touchscreen.

Customized solution or off-the-shelf: The choice is yours!

Standard products

Customers looking to quickly benefit from our broad experience often turn to our wide range of standard products. Especially appealing are our universal controls that can be combined with several different types of displays. The operating software is preset with industry-specific operating sequences that can be further configured for individual needs.

Contact us or visit our website to obtain more detailed information.

Customized solutions

Our particular strength, however, lies in customer-specific development and longterm partnerships. This allows us to jointly create products that fulfill your specific needs, meet future challenges and allow clear differentiation from the competition. Development of a new product allows virtually unlimited design freedom around a wide range of features such as number, design and configuration of inputs, outputs and interfaces as well as the definition of the user interface.

The accompanying software gives you further freedom to implement specific operating sequences, communication protocols and versions allowing for country-specific considerations or for the use in several different applications with similar requirements.

We are happy to advise you personally!
